GEORESTORE LAUNCHES GEORESTORE.COM, PROVIDING A CENTRALIZED SOURCE OF INFORMATION FOR THE RENEWABLE ENERGY INDUSTRY

LEE'S SUMMIT, MO (September 15, 2009) — GeoREstore, LLC, today announced the launch of GeoREstore.com (geo-re-store), a new website that provides a single point of online access for renewable energy news, information, data and service provider listings. The site provides news from the sustainable energy and Smart Grid sectors, information on development projects and funding sources, and comprehensive listings of manufacturers, suppliers, contractors and other service providers within the various renewable energy sectors.

GeoREstore.com is a place for equipment and service providers in the solar, wind, hydro, geothermal and biofuel sectors to connect online and foster development within the renewable energy industry. "Our development emphasis is twofold", said Susan Escher, Managing Partner of GeoREstore. "First, we provide an easy-to-navigate website with comprehensive renewable energy industry information. Second, we facilitate the development of renewable energy projects by making it easy for buyers and sellers to connect through our directory listings and request for information functionality."

GeoREstore.com is committed to continued innovation and already has plans to add new information and additional functionality over the next several months.

GeoREstore.com is affiliated with GeoREstore Energy Practices, a consulting firm that provides project management and strategic planning consulting services for the renewable energy industry, including Smart Grid, customer information systems, energy efficiency related projects and transmission, distribution and generation IT projects.
